EDUCATION

Akita International University

Akita, Japan

- B.A. in Global Business, Concentrations in Data Analytics

Sep 2022-Aug 2026

- Cumulative GPA: 3.71/4.00 | Honors: Dean's List

Expected Graduation: Mar 2027

University of New South Wales (UNSW Sydney), Exchange program

Sydney, Australia

- Information Systems, Concentrations in Data Science (GPA 3.7/4.0)

Aug 2024-Aug 2025

- Relevant coursework: Artificial Intelligence & Deep Learning Models, Statistical Machine Learning, Database Management & Big Data Infrastructures, Databases for Business Analytics, Programming for Data Analytics, Introduction to Business Analytics, Data Modeling, Time Series Econometrics

CORE COMPETENCIES

Programming & Tools: Python (pandas, scikit-learn, TensorFlow/Keras), R, SQL, Git, Jupyter, Power BI, Excel (Power Query, Pivot, VBA), Oracle, PostgreSQL

Machine Learning & AI: Supervised & unsupervised learning, feature engineering, cross-validation & regularization, hyperparameter tuning (Bayesian search), gradient boosting, GLM, time-series forecasting (LSTM, RNN, ARIMA), model explainability (SHAP), A/B testing

Data Engineering & Modeling: ETL/ELT data pipelines, ERD design, relational modeling, 3NF → Star schema, data marts & materialized views, data quality & validation, data lineage

PROFESSIONAL EXPERIENCE

EY Taiwan | Consulting, *Emerging Technology & Data Science Intern*

Jan 2026- May

2026

PROJECT EXPERIENCE

F1 Driver Management Analytics DWH | Oracle SQL, ETL, Power BI, Star Schema

May 2025-Aug 2025

- Architected an analytics-ready warehouse (3NF → Star schema) with Oracle SQL ETL, constraints/lineage, and materialized views to transform telemetry into KPI-ready datasets.
- Published decision dashboards for non-technical stakeholders and led a 4-person team with Agile ceremonies and clear versioned documentation.

Ad Monetization Analytics (Music Streaming) | SQL, ERD, ETL, ROAS

Feb 2025-May 2025

- Designed normalized ERD (3NF) and ETL pipelines over 50k+ interactions; authored CTEs/window functions for CTR, cohort engagement, and artist-level ROAS.
- Reduced feedback cycle by 25% and identified high-lift segments to improve targeting and budget allocation.

Student Housing Operations Optimization & KPI Dashboard | Power BI, ETL

Feb 2025-May 2025

- Delivered a real-time Power BI data model for 3,000+ rooms across 6 residences with ETL on 11k applications; enabled live availability and KPI tracking.
- Diagnosed bottlenecks and implemented actions that increased utilization by ~12% and reduced decision latency across stakeholders; documented model (sources, lineage, DAX/KPIs) and implemented RLS/access controls.

Telecom Customer Churn Prediction (Graduation Thesis) | Python, TensorFlow/Keras

May 2025-Present

- Built a leakage-safe ML pipeline across 51k customers (28.8% churn) with ELT layers (raw→staging→mart); benchmarked class-weighted logistic vs. tuned Wide-and-Deep (Bayesian search, early stopping) to lift ROC-AUC and recall at fixed precision.
- Operationalized explainability (SHAP) to surface drivers and produced Top-N outreach lists with clear retention rules, measurement, and documentation.

COMPETITION EXPERIENCE

CFA Institute Research Challenge(ASICS: 7936), Team Lead

Aug 2025-Present

- Built audit-ready 3-statement and risk/valuation stack (DCF, comps, WACC) with scenario/sensitivity modeling; automated KPI roll-ups in Python/Excel to support risk-based decisions.
- Led a 4-member team end-to-end; partnered with IR and stakeholders; delivered board-style presentations translating analytics into a clear investment thesis, showcasing finance acumen, logic, and communication.
